

Product Care Sheet

Fabrics

100% Acrylics & Acrylic Jacquards (ex. SUNBRELLA):

Acrylic fabrics are appropriate for either indoor or outdoor use. Solution dyed acrylic features a soil and stain-resistant finish that can be cleaned with a solution of natural soap in lukewarm water. Solution dyed acrylic does not promote mildew growth.

However, mildew may grow on dirt and other foreign substances that are allowed to stand on fabric. For mildew stains (often shows up as black “spots”), prepare a mild solution 100% bleach plus two capfuls of a natural soap (dish soap works great) per gallon of water. Sponge thoroughly with clean water and air dry. Placing cushions in the full sun will help activate the bleach....rinse very thoroughly!

Olefins/Polyester Blend:

Blended to be very durable and naturally resistant to mildew and stains. Olefin fabric can be cleaned with a solution of warm water and mild detergent. For stubborn stains, diluted bleach can be used without affecting the fabric color. Rinse thoroughly with clean water and air dry.

Printed Acrylics:

Acrylic prints offer vibrant color with all the weather and stain resistance of acrylic fabrics. The designs are printed on 100% solution dyed acrylic base cloth. Spot wash by sponging briskly with a natural soap in lukewarm water. Rinse thoroughly with clean water and allow to air dry. **DO NOT USE BLEACH! THESE FABRICS ARE NOT WARRANTED AGAINST FADING.**

Frames

Outdoor Metal:

We recommend that you wash your furniture with a mild liquid soap. Using a high pressure garden hose or pressure washer (from a distance) can make cleaning the frames much easier. Scuff marks can be removed with a light abrasive, furniture scratched down to the bare metal will require sanding with 400 grit sandpaper on affected area. Match the color with touch-up paint from Casual Image. Smudge marks can be cleaned using a product like "Soft-Scrub" product used for cleaning bathrooms. Over the course of time UV light will cause fading of metal finishes...many of our manufacturers offer limited warranties regarding finish vs. structural frame integrity.

Teak:

Unfinished teak will develop a gray patina color over time, which actually helps protect the wood. If you would like to treat the teak, simply clean your teak once in the spring with a brush and a solution of liquid detergent and a small amount of household bleach dissolved in warm water. A few times a year, your teak may require a coat of Teak Sealer .

Shorea:

Shorea is a heavy tropical hardwood compared to teak. Because of its high oil content, shorea easily sheds water making it highly resistant to rotting. Also highly resistant to bug infestation, this dense wood makes excellent outdoor furniture. Moderate checking in the grain is normal with weathering and many prefer the beautiful weathered silver gray color, which happens naturally. Staining, or finishing shorea is not necessary. They will weather naturally to a beautiful silver gray over the course of about two years. If the original color is preferred, teak oil can be applied seasonally to maintain the color. Teak Protector is another option to help to protect and preserve the color.

Outdoor Wicker:

Natural outdoor wicker may be brushed lightly to remove and topical debris. Natural wicker may also be hosed down with water if necessary to remove dust and dirt between the wicker reeds. Sand scratches in the wicker and paint with touch up provided by Casual Image. Resin wicker may cleaned using soap and water.

Table Tops

Faux Stone Tables:

For general cleaning, any mild liquid dish washing soap and warm water will clean up most spots and spills. DO NOT USE any harsh abrasive chemicals or cleaners. For stubborn stains, standard patio furniture cleaner may be applied available at Casual Image. If fully exposed, you may need to apply a sealer (commercial tile and grout sealer) to ensure protection. Make sure the sealer is applied in a water thin coat as buildup can cause discoloration.

Stone Tops:

Re-seal your tabletop annually using a penetrating stone sealer, available at most hardware stores. For routine cleaning, use mild soap and water with a soft cloth. Spills should always be wiped up promptly, red wine and citrus juice left for prolonged periods of time can affect the natural stone appearance and resistance to stain.

Cast Aluminum:

Periodically clean the finish with a sponge or soft bristle brush using a cleaning solution with 1/4 cup (2 oz.) mild liquid soap in a gallon of lukewarm water (100° F / 38° C) . Rinse thoroughly. Avoid using abrasive cleaners. For gloss finishes, we recommend periodic waxing of the frame with a high grade automotive paste wax or the use of a commercially available protectant to help maintain and/or restore the luster of the finish.

Caution:

In seaside or salt water pool conditions...salt can accumulate on the finish, leading to finish failure. In these environments, repeated cycles of condensation followed by evaporation cause build-up of these aggressive corrosives. Regular cleaning with mild soap and water will remove the concentrated deposits and protect the furniture finish per the above instructions.
